

<b>category</b>	<b>Acoustic Treatment Packs</b>
<b>description</b>	<b>ATP®01 – for rooms 9–13m<sup>2</sup></b>
<b>part code</b>	<b>tbc</b>

## Description

In order to make your choice easier, the ATP®01 pack has been created for small-sized home cinema rooms and home studios so that real acoustic benefit can be obtained. Choose from two available ATP®01 solutions – Standard or Excellence – depending on your acoustic needs and personal taste.

The installation examples of ATP®01 shown below position the acoustic treatment components at optimum spacing between the listener and the

speaker while minimising the SBIR (Speaker Boundary Interference Response) and the modal emphasis, which produces a frequency response as flat as possible in the room.

These acoustic treatment packs offer a great opportunity to significantly improve the performance of your sound system.

All packs are supplied with assembly instructions, as well as the glues and tools which are necessary to apply the acoustic modules.

## Where to apply

- Rooms with an area between 9 and 13 square metres
- Rooms with volumes between 22 and 35 cubic metres
- Home theatre, hi-fi rooms or instrument rooms, home studios, small home theatre rooms

### Acoustic characteristics:

The values in the tables/graphs below were obtained by simulation in specific JAS® software and later confirmed through acoustic analysis of the rooms.

The simulated and tested rooms are totally empty, and only the referred ATP® acoustic panels are applied.

### Constructions used had the following characteristics:

**Dimensions:** L: 3.47m W: 2.85m H: 2.50m  
**Walls:** Painted masonry; wooden door  
**Ceiling:** 12mm-thick plaster  
**Floor:** Natural floating parquet

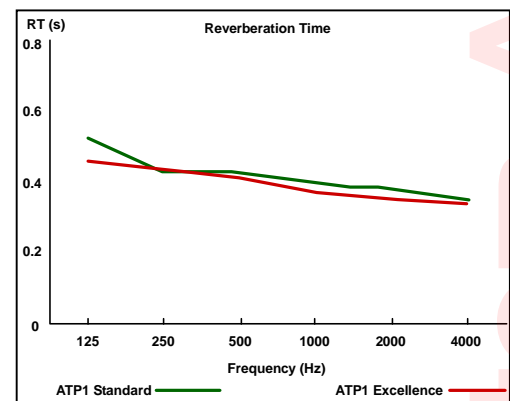

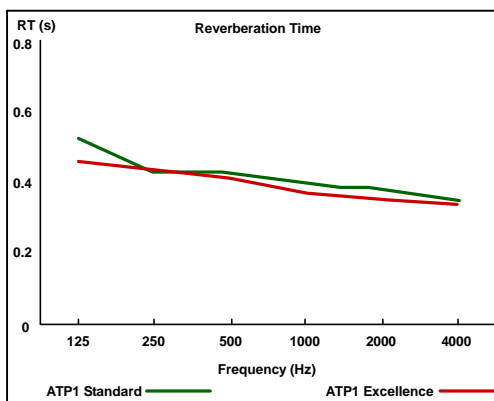

**EXCELLENCE**

**STANDARD**
